## Professional Summary

UI Designer and Front-End Developer with a strong design background and long-term experience building clear, usable, and production-ready interfaces.

I started my career in 2008 as a graphic designer, developing deep expertise in layout, typography, and visual hierarchy. This foundation shapes how I design and build interfaces today, with a focus on clarity, consistency, and real-world usability.

I design in Figma and implement interfaces using HTML, CSS, JavaScript, and React, focusing on reusable components, maintainable layouts, and clean front-end execution. I am comfortable owning UI work end to end, from design systems to production handoff.

## Core Skills

### UI Design & Interface Thinking

Strong foundation in interface design principles including layout hierarchy, spacing, alignment, typography, color usage, and readability. Experienced in designing interfaces that are clear, balanced, and easy to use, with attention to flow and real-world usability rather than visual noise.

### Design Systems & Figma

Highly comfortable working in Figma to design and maintain design systems from scratch. Experience defining color tokens, typography styles, spacing scales, and reusable components such as buttons, inputs, form elements, and navigation patterns. Confident in building scalable component libraries and using Figma prototyping to validate interaction flow.

### Front-End Development

Hands-on experience translating designs into clean, maintainable front-end code using HTML, CSS, JavaScript, React, and Next.js. Comfortable building reusable components, structuring layouts, and implementing interfaces with long-term maintainability in mind. Working knowledge of TypeScript and modern React patterns.

### Visual & Creative Tools

Experienced with Adobe Illustrator and Photoshop for interface assets and visual work. Prior experience working on video-based SaaS content using Adobe Premiere Pro and After Effects, contributing to motion and visual storytelling when needed.

## Experience

### HR.com — UI Designer & Front-End Developer

Remote (Canada-based company) · 2018 — Present

- Design and build end-to-end UI solutions for research portals, marketing websites, and campaign landing pages used by a global HR audience
- Own UI structure, layout systems, and front-end execution, translating complex requirements into clear, scalable interfaces
- Develop responsive, accessible front-end implementations using clean HTML, CSS, and JavaScript with performance in mind
- Support and mentor designers across distributed teams, helping maintain design quality, consistency, and realistic front-end execution
- Support and mentor designers across distributed teams, helping maintain design quality, consistency, and realistic front-end execution

## Selected Projects (Detailed case studies available on portfolio)

### 17 Oranges — Company Website

Designed and built a production company website from stakeholder brief through Figma design to front-end implementation, focusing on clarity, brand tone, and scalable layout structure.

### HireFlow — Recruitment Dashboard (React)

Designed and built a desktop-first recruitment management dashboard, focused on reusable components, scalable layout architecture, and realistic SaaS workflows.

### Budget Hive — SaaS Landing Page

Designed and built a SaaS landing page focused on clear messaging, strong visual hierarchy, and clean front-end structure.
